About HPLC

A complete solution for your business!

Being the most trusted brand in chemical industry's we are committed to provide stringent quality products with great customer satisfaction.

We proudly announce that our manufacturing facility is WHO-GMP and CE certified and accredited with

- ISO 9001:2015
- ISO 14001:2015
- ISO 45001:2018

Presently,
we are making over
4,500
PRODUCTS

JOURNEY

With the blessings of Late **Shri Jai Kishan Aggarwal** our esteemed founder and a pioneer in the chemical industry with over six decades of experience—our journey in the world of chemicals began in **1959**.

Building on this rich legacy, High Purity Laboratory Chemicals Private Limited (HPLC) was established in 2009 under the visionary leadership of **Mr. S. K. Aggarwal**, a second-generation entrepreneur with 49 years of expertise in laboratory chemical product development, marketing, and administration.

Today, HPLC stands as one of the most trusted and leading brands in the industry, recognized for its commitment to quality and excellence in manufacturing and distributing high-purity organic and inorganic laboratory fine chemicals.

MISSION & VISION

HPLC was founded with an aim to meet life science research needs at a global level through effective collaborative work and finding path-breaking scientific solutions. We encourage, accelerate and promote scientific research by providing high-quality, reliable and sustainable products that are used for the R&D, QC and production requirements of several Industries & Institutions.

*Arise, awake, and do not stop
until the goal is reached*

OUR VISION

"To be a competitive leader in the chemical sector locally and globally by constantly developing and upgrading our products while remaining true to our core values."

OUR MISSION

"Our mission is to manufacture and distribute high-quality chemicals while maintaining a commitment to sustainability and being a supplier of choice."

GMP compliant & State-of-the-art PLANT

Spread over
2.5 acres
of land

Constructed area of
1,40,000 sq. ft.

Benefits **HPLC** offers to its clients

GLOBAL MARKETING NETWORK

HPLC has established a robust marketing network both in India and internationally.

Currently, we distribute our products and services to over 15 countries worldwide, through a combination of direct channels and trusted business partners. Our distribution network comprises more than 100 distributors, stockists, and retailers across the globe.

We actively welcome new distributors to join our growing family. Additionally, many of our products are available on an OEM basis. We look forward to building mutually beneficial partnerships with our business collaborators.

WEBSITE

We understand the importance of continuous improvement and innovation.

To stay ahead of industry trends and better meet our customers' evolving needs, we constantly seek new and more effective ways to deliver value. By combining our expertise and experience, we strive to help you achieve your goals more efficiently.

Our website, www.hplcindia.com, is continuously updated to offer enhanced services — including the latest product information, promotional offers, Certificates of Analysis (COAs), and Safety Data Sheets (SDSs).

COAs and SDSs can be directly accessed from our website or requested via email at customercare@hplcindia.com.

HPLC Solid Production Unit

Our state-of-the-art manufacturing facility encompasses research engineering, product manufacturing, a fully equipped testing laboratory, and a dedicated in house R&D department. This integrated approach empowers us to stay ahead of the curve and maintain a competitive edge in the chemical industry. We are deeply committed to environmental responsibility and employee safety. Through continuous awareness programs and strict safety protocols, we work proactively to minimize potential risks and reduce our environmental impact.

EQUIPMENT CAPACITY

- S. S. Evaporating pan 1000L
- S. S. Evaporating pan 750L
- S. S. Jacketed crystalline pan 500L
- Glasslined jacketed evaporating pan 500L
- Glasslined jacketed evaporating pan 50L
- S. S. Evaporating pan 50L
- S. S. 316 High pressure autoclave 10L
- S. S. 316 Nutsche filter 250L
- S. S. 316 Nutsche filter 130L
- S. S. Centrifuge Basket size dia 24,18, 10
- Steam heated tray dryer 12 tray
- Steam heated tray dryer 24 tray
- Steam / Electric heated tray dryer 48 tray
- S. S. Vibrator / Shifter
- S. S. Micropulvariser

HPLC Solvent Production Unit

Our manufacturing unit is equipped with sophisticated machinery and advanced equipment for the distillation and purification of a wide range of solvents. We place strong emphasis on sourcing high-grade raw materials, ensuring our manufacturing processes consistently align with the highest international quality standards.

- Our existing capacity of solvents is more than **2,50,000 liters** but we can increase it as per the growing demand of our pivotal clients.
- The facility is designed to utilize over 7000 Liters distillation units with the batch volumes varying from few liters to 1600 Liters.
- Our facility has a state-of-the-art distillation equipment range from 1600 Liters to 20 Liters including both SS and glass.

HPLC Solvent Production Unit

EQUIPMENT CAPACITY

• S. S. Distillation unit cum reactor	1000L
• S. S. Distillation unit cum reactor	230L
• Glasslined reactor with Distillation unit	1600L
• Glasslined reactor with Distillation unit	600L
• Glasslined reactor with Distillation unit	200L
• Glass Distillation cum reactor	100L
• Glass Distillation unit	50L
• Glass Distillation unit	20L

Quality Policy

At HPLC, our customers always come first. Customer satisfaction isn't merely a daily mantra—it's the core reason behind everything we do.

As a quality-driven organization, we are dedicated to delivering only the finest products to our valued clients. Our robust Quality Management System ensures that every stage of manufacturing is closely monitored by a conscientious and skilled QC team.

By combining deep industry expertise with an unwavering commitment to excellence, we continuously pursue superior performance through enhanced productivity and the use of high purity ingredients—creating real value and trust in every interaction.

Our quality control department is equipped with state-of-the-art and latest testing instruments

- High Performance Liquid Chromatography
 - (HPLC) instrument
 - Coulometric Karl Fischer Instrument
 - Gas Chromatograph (GC)
 - UV Spectrophotometer
 - Atomic Absorption Spectrophotometer
- and many more.....

Certifications

HPLC an ISO 9001:2015, ISO 14001:2015, ISO 45001:2018 certified company in accordance with the quality management system, a quality manual and inspection documents define the process and activities of our organization. We periodically monitor our services and performance to constantly improve and update ourselves. We are committed to manufacture products as per International Standards for total customer satisfaction, achieved by our dedicated team work.

GMP is a system for ensuring that products are consistently produced and controlled according to quality standards. It is designed to minimize the risks involved in any pharmaceutical production that cannot be eliminated through testing the final product.

CE marking on a product indicates that the product complies with and has satisfied the essential requirements set out by the In Vitro Diagnostic (IVD) Medical Devices Directive 98/79/EC, it also demonstrates the fact that the product is fit for its intended purpose.

Quality Designations

Laboratory Reagents & Extra Pure (LR & EP)

These Consist of wide range of organic and inorganic reagents in preparative chemistry and other related industries. Careful control ensures that a consistently high defined quality is maintained throughout.

Analytical Reagents (AR)

These Chemicals are useful in sophisticated analytical instruments and research work, where high purity is essential. The trace impurities in these products are restricted to the lowest possible limits for the utmost precision in laboratory work.

Electronic Grade (EL)

These chemicals have very stringent limits for metallic impurities as required by the Electronic Industry.

Microbiology

Products have been specially purified and tested for their microbiological applications

Highly Process Liquid Chromatography (HPLC) & Spectroscopy Grade Solvents

An extensive range of highly characteristic HPLC solvents are produced and tested as per the latest techniques to assure interference free HPLC separation and detection. Key parameters such as UV absorbance, transmittance, non volatile matter, moisture content, fluorescence impurities and assay are very carefully controlled.

Biochemical

These are high purity chemicals specially manufactured and tested for Biochemical research. As required heavy metal content is carefully monitored and reduced to minimum possible levels. Our range includes amino acid and their derivatives, carbohydrates and their derivatives, enzymes, enzymes substrates etc.

Buffers

Buffers are provided in capsule form, powder form as well as solution form to work in varying pH ranges in chemicals. We also offer wide range of Biological Buffers

Diagnostic Reagents

These are specially produced for the use of various hospitals, clinical, & pathological laboratories for diagnostic purpose.

Purified

Purified commercial products used in many chemical laboratories.

AAS (Atomic Absorption Standard) Solution

These standard solutions are used as reference standards for calibration of the instruments in Atomic Absorption Spectroscopic Analysis.

ICP (Inductively Coupled Plasma)

These standard solutions are used as reference standards for calibration of the instruments in Inductively Coupled Plasma Analysis.

Dried

Products containing highly reduced water content for anhydrous reactions, synthesis and assay studies.

GC

For Gas Chromatography applications and suited for use in GC instrument.

Scintillation

Ideal for scintillation studies

Gradient Grade Solvents (GG)

Gradient grade solvents are used in high performance liquid chromatography (HPLC) for chromatographical separation. GG solvents are suitable for UPLC & UHPLC. This can be used in many different industries, including pharmaceuticals, analytical chemistry, and photography etc. Some applications of gradient grade solvents include:

- Enantiomeric separations & separation can cause the baseline to increase UV detection
- Alternative to reversed-phase liquid chromatography
- UV and fluorescence detection

Indicator Powder, Buffer, Solution & Paper

Various types of indicators such as absorption indicator, metal ion indicators, redox indicators of high purity are provided as powder as well as ready to use liquid forms for analytical purpose. Paper indicators are produced using "Whatman" filter papers. pH papers cover both narrow and wide range from 1 - 14.

Tech / Pract

General, Commercial grade for synthesis and routine applications.

Disinfectants & Cleaning Solutions

Teepol, Superlab and Lyso

Nanotechnology Products

Top-quality nanomaterials for research and production purposes. Our nanomaterials find applications in a wide range of industries, including inks, paints, polymers, and more.

HIGH PURITY LIQUID CHROMATOGRAPHY (HPLC Range)

Our high-purity liquid chromatography (HPLC) solvents are meticulously analysed to ensure minimal UV absorption. Each solvent is packed under nitrogen to enhance stability and resist degradation. Bottles are securely sealed with Teflon liners to prevent contamination. These solvents feature smaller particle sizes compared to conventional liquid solvents, and are designed for use with high pressure columns to maintain exceptional quality and consistency.

Ultra-clean. Ultra-consistent. Ultra-reliable

LC-MS SOLVENTS

Ultra-Pure Solvents for High-Sensitivity Analysis

LC-MS Solvents are specially engineered for use in Liquid Chromatography-Mass Spectrometry (LC-MS) systems, where precision, sensitivity, and reproducibility are critical. These ultra-pure solvents feature low levels of metal ions, non-volatile residues, and UV-absorbing impurities, making them ideal for trace-level detection in complex sample matrices.

Each batch is rigorously tested, 0.2 μm filtered, and degassed—ensuring optimal performance and maximum instrument protection across high-demand applications in pharmaceutical, environmental, and life sciences.

FEATURES & BENEFITS

ULTRA-HIGH PURITY

Ideal for trace-level analysis

LOW METAL CONTENT

Ensures minimal ion suppression

PRE-FILTERED & DEGASSED

Ready for direct use (0.2 μm filtration)

LOW UV ABSORBANCE

Clean baselines in UV and MS detection

MS-COMPATIBLE

Suitable for ESI, APCI, & advanced MS platforms

CONSISTENT BATCH QUALITY

Reliable results every time

APPLICATIONS

- Drug Development & Quality Control
- Proteomics & Metabolomics
- Environmental & Food Safety Testing
- Clinical & Forensic Toxicology

Laboratory Cleaning Agents

The Ideal Solution for Cleaning of Laboratory Equipments

SUPER LAR® CLEAN

CODE	PRODUCT NAME	CONCENTRATION OF USE	pH	NOTES FOR USE
028823	Super Lab Clean MA 01 Alkaline	2 - 5%	11.6 - 12.0	Universal cleaning agent for heavy contamination. For hard water even up to 40 d. For cleaning tablets, tiles & floors in the laboratory. Tested for radioactive decontamination. Suitable for ultrasonic cleaning.
028824	Super Lab Clean MA 02 Neutral	2 - 5%	7.2 - 7.5	Special cleaner for precision instruments of glass, quartz & sensitive metals. Suitable for ultrasonic cleaning.
028825	Super Lab Clean MA 03 Phosphate-Free	2 - 5%	11.6 - 12.0	Universal cleaning agent for heavy contamination. With very hard water and demineralized water. Environmentally acceptable as it contains no phosphate. Suitable for ultrasonic cleaning.
028835	Super Lab Clean MA 04 Neutral	2 - 5%	6.5 - 8.5	Special cleaning of equipment made of alkali sensitive metals & alloys with the same properties, as well as quartz and glass precision measuring equipment contains oils and polymers.

TEEPOL® IN THE LABORATORY

APPLICATION	CONCENTRATION	REMARKS
Chemical glassware in bulk e.g. bottles flasks beakers tubing metal or porcelain dishes.	0.5% (5 ml per litre)	Use hot water if possible for best results.
Sinks, wash basins, large porcelain containers.	0.3% (5 ml per litre)	Apply with drop rag or cloth.
Microscope slides, delicate pieces of apparatus fine wire mesh and sieves.	0.3 - 0.6% (3 ml - 6 ml per litre)	Cold water can be used.
General wetting	1.1% - 0.2%	Varies with job.
Rough cleaning floors, walls laboratories etc.	5 ml per litre of Warm water	Apply to brush or mop.
Benches racks, shelves enamel work and painted surfaces.	3 ml - 6 ml per litre of Warm water	Quite safe for high glass finishes. Use cold water for wood work to avoid softening.
Degreasing of metal parts.	6 ml - 12 ml per litre of hot water	Alkalies may be used in conjunction with teepol except where they are likely to cause corrosion.

HPLC Warehouse

The consolidated manpower in our manufacturing unit is comprising of skilled and dedicated workforce, qualified & experienced chemical engineers.

We regularly keep upgrading our facility to keep abreast with latest international trend and manufacture best quality of products.

We create awareness among the employees and take appropriate measures for safety of the environment and minimize potential risk and impact.

All the products are packed with ultimate care to ensure safe delivery of goods to the desired destination under the supervision of our delivery managers.

HPLC Warehouse

With consistent focus on quality, our company is engaged in offering a quality assure chemicals. We offer a large selection of lab chemicals in diverse packaging to meet custom industry specific needs.

KEY FEATURES AND BENEFITS

COST EFFECTIVE

SAFE HANDLING

LONG SHELF LIFE

With our storage tanks holding upto 250 tonnes and our dry storage facilities capacity of one thousand tonnes, we are able to store & deliver chemicals to a truly industrial scale.

We offer competitive pricing as well as top-notch customer srvcies.

	ZrO(NO ₃) ₂ .XH ₂ O M.W. : 231.23+X H ₂ O						
KIT151	ZN Acid Fast Stain Kit		KIT	Kit	801	38220090	5%

- KIT024 CALCIUM HARDNESS TESTING KIT** **TEST: 100** **M.R.P.: RS. 2205.00**
- Take 25 ml of water sample in the test bottle (No-1)
 - Add 10drops of Calcium Hardness reagent-2 (CH-2) and mix.
 - Add 10drops of Calcium Hardness reagent-3 (CH-3) and mix.
 - Add some Calcium Hardness reagent-3 (CH-3) and mix until a distinct pink colour develops.
 - For Hard/Soft water: add Calcium Hardness reagent-4(CH-4),shake well after each drop until the colour changes from pink to purple. Count the no. of drops of CH-4 required for colour change.
Calcium Hardness = no. of drops of CH-4 x5 (ppm in terms of CaCO_3)
- KIT026 RESIDUAL CHLORINE TESTING KIT** **TEST: 200** **M.R.P.: RS. 558.00**
- Take 5ml of water sample in the test bottle(No-1)
 - Add 5 drops of Residual Chlorine reagent-1 (RC-1) and mix well.
 - The colour is compared with the Residual Chlorine colour chart and record the residual chlorine value.
- KIT022 ARSENIC TESTING KIT** **TEST: 25** **M.R.P.: RS. 3087.00**
- Take 50ml of water sample in the mouth bottle.
 - Add 1 gm of Arsenic reagent-1(As-1) and 10 gm of Arsenic reagent-2(As-2).
 - Followed by 10 ml of Arsenic reagent-3(As-3).
 - The glass tube fitted with Mercuric Chloride paper and Lead Acetate wool is placed in position. The apparatus is kept in a water bath at 40-60°C /40 minutes.
 - Take carefully the Mercuric Chloride paper from the apparatus and the stain produced is compared with the Arsenic colour chart immediately and record the Arsenic value.
The Mercuric Chloride paper used in the test should not be exposed to bright sunlight.
- KIT020 TOTAL ALKALINITY & PH TESTING KIT** **TEST: 2 X 200** **M.R.P.: RS. 1278.00**
- Take 25ml of water sample in the test bottle (No-1).
 - Add 4-5 drops of Total Alkalinity Reagent-2 (TA-2) and mix until an orange yellow colour develops.
 - Add Total Alkalinity Reagent-1 (TA-1), shake well after drop until the colour changes from orange yellow to orange red.
 - Count the no. of drops of TA-1 required for colour change.
Total Alkalinity = no. of drops of TA-1 x 5 (ppm in terms of CaCO_3)
 - pH:
 - Take 10ml of water sample in the test bottle (No-1).
 - Add 3-4 drops of pH Reagent-1 (pH-1) and mix well.
 - The colour is compared with the pH colour chart
- KIT030 TOTAL HARDNESS TESTING KIT** **TEST: 200** **M.R.P.: RS. 1152.00**
- Take 25ml of water sample in the test bottle (No-1).
 - Add 10 drops of Total Hardness reagent-1 (TH-1)
 - Add 5 to 6 drops of Total Hardness reagent-2 (TH-2) and mix until pinkish colour develops.
 - For Soft water: add Total Hardness reagent-3(TH-3),shake well, until colour changes from pink to blue. Count the no. of drops of TH-3 required for colour change. Total Hardness no. of drops of TH-3 x 2 (ppm in terms of CaCO_3)
 - For Hard water: add Total Hardness reagent-4(TH-4), shake well, until colour changes from pink to blue. Count the no. of drops of TH-4 required for colour change. Total Hardness=no. of drops of TH-4 x 5 (ppm in terms of CaCO_3)
 - For much Hard water (as river water,sea water,etc.): add Total Hardness reagent-5(TH-5), shake well, until colour changes from pink to blue. Count the no. of drops of TH-5 required for colour change.
Total Hardness=no. of drops of TH-5 x 50 (ppm in terms of CaCO_3)
- KIT010 ALIZARIN TESTING KIT** **TEST: 200** **M.R.P.: RS. 603.00**
- (For the detection of Acidity and Heat Stability of Milk)
- Place 2 drops of milk on the glass plate and add 2 drops of Alizarin Red-S solution.
 - Mix the contents with the glass rod thoroughly.
 - Note the colour of the mixture and presence of any flakes or clots.
 - The presence of a flake or clot indicates a positive test.
 - Milk showing positive test is not suitable and not considered for the manufacture of evaporated milk.
- KIT028 DISSOLVED OXYGEN TESTING KIT** **TEST: 25** **M.R.P.: RS. 4230.00**
- Take 300 ml of water sample in the test bottle(No-1).
 - Add 2ml of Dissolved Oxygen reagent-1(DO-1) very carefully and tip of the filler is dipped well below the water level.
 - Add 2 ml of Dissolved Oxygen reagent-2(DO-2) very carefully and tip of the filler is dipped well below the water level.
 - Replace the stopper without inclusion of any air bubble and thoroughly mix the content by shaking the test bottle (No-1) several times and allow the precipitate formed to settle.
 - After 2-3 minutes of settling, carefully remove the stopper and immediately add 2 ml of Dissolved Oxygen reagent-3(DO-3) very carefully by running the reagent down the neck of bottle and mixed thoroughly to dissolve the precipitate settled completely.
 - Take 200 ml of the solution in an iodine flask (No-2) and add 4 drops of Dissolved Oxygen reagent-4(DO-4).
 - Titrate with Dissolved Oxygen reagent-5(DO-5) taken in a 10ml syringe until the colour changes from blue to colourless.
Dissolved Oxygen (Mg/L or ppm) = Volume of Dissolved Oxygen reagent-5(DO-5)

Safety Manual

Storage and Handling of Hazardous chemicals

As a large number of materials of different nature are to be stored in process industries, warehouses, laboratories etc. it is highly essential that these are stored safely and properly and a high sense of good house keeping practice is to be maintained. For the purpose of safe storage, these chemicals can be classified into different groups, based on their chemical characteristics.

1. Incompatible chemicals:

These are chemicals, which remain harmless if stored in isolation, but upon allowing to come into direct contact could pose severe fire explosion hazards.

Some of this type are:

- | | | |
|---------------------------------|---------------------|------------------------------|
| • Con. H_2SO_4 | • Sodium hydride | • Alcohols, Ketones, Ethers |
| • Glycerol | • Hydrogen peroxide | • H_2O |
| • Acetone, Methanol, Glycerine. | • KMnO_4 | • H_2O |
| • Con. HNO_3 | • KMnO_4 | • Flammable Organic Solvents |
| • Sodium metal | • CrO_3 | |

In all the above cases instant fire will take place due to high amount of heat produced as a result of the vigorous reaction between these compounds.

2. Explosive chemicals:

These are chemicals which under certain conditions of heat, pressure, shock etc. undergo rapid decomposition, evolving large volumes of gas and heat, which in turn further heats up the surrounding air to expand so rapidly that the entire process ends up in what is called explosion. e.g.

Nitrates (ammonium nitrate), Persulphates (ammonium persulphate), Peroxides (hydrogen peroxide), Permanganates (potassium permanganate), Perchlorates (ammonium / sodium / potassium), Dichromates (ammonium), Hydroxylamines and their salts, Azides (sodium azide) etc, etc.

Some of the recommendations for their storage are

1. All chemicals falling under this category should be stored in a separate block, away from the main building.
2. Before storing these materials it should be ensured that the relevant MSDS is available.
3. Ensure that the environment conditions such as temperature, RH etc. is compatible to the stability of the product.

4. Avoid storage for prolonged periods.
5. Proper material handling equipments should be used during transportation from one location to another.
6. Rough handling, dragging of the containers, stacking at higher levels thus creating more strain on the bottom containers etc should be avoided.
7. No attempt should be made to scrap out the material with any metal object nor should it be pulverized or powdered.
8. Disposal of explosive chemicals should be done only as per the procedure laid down in the MSDS or as per the manufacturers instruction.

3. Oxidising agents:

Since oxidising agents are capable of generating oxygen by way of heat, chemical decomposition or by interaction with other incompatible materials, they help fire to ravage even in the absence of atmospheric air or oxygen. Following categories of chemicals are considered to be most powerful oxidizers and these are to be handled very cautiously. e.g.

Peroxides, Persulphates, Perchlorates, Periodates, Permanganates, Bromates, Nitrates, Chromates, Dichromates, Perborates, etc.

As a general rule all flammable solvents must be stored away from oxidizing chemicals and these should never be allowed to come into contact with each other. Also it is advisable to store the oxidizing chemicals separately, having adequate ventilation and cooling arrangement since most of these chemicals are susceptible to thermal decomposition.

4. Flammable chemicals:

Combustible materials can be of all the 3 types viz. solids, liquids or gases although the rate of fire propagation is different for each type, it is least in the case of solids, however it is much faster in case of liquid and still much faster in case of gases. Some of the recommendations for storage are:

1. All flammable solvents must be placed in a cool place under shelter with proper ventilations.
2. The containers should be properly closed and should not be leaking/damaged condition.
3. No hot jobs such as welding, gas cutting, grinding or any other source of ignition such as naked flame, smoking etc should not be allowed in and around the storage area.
4. No electrical equipments and fixtures must be avoided in the storage block, if installed they should be flameproof in nature and earthing should be provided.
5. Adequate fire fighting equipments should be available at strategic locations to handle emergency.
6. Proper colour coding should be implemented for correct identification.

Safety Manual

5. Water sensitive chemicals:

There are many chemicals which are highly reactive with water/moisture. Upon contact with water they react violently resulting in fire/chemical splash. These are to be stored in leak proof water tight containers in a dry place or dry sand beds preferably which act as good adsorbant in case of leakage. e.g. metallic elements such as sodium, potassium, rubidium, magnesium, lithium etc. metal salt such as Acetic anhydride, Calcium hydride, Sodium metal, Sodium hydride, Con. Sulphuric acid, Nitrides, sulphides, carbides, borides etc. organic chloro compounds such as Acetyl chloride, Aluminium chloride, Thionyl chloride etc. Only recommended fire fighting agents such as Dry powder, CO₂ should be used in the affected area.

6. Toxic chemicals:

These chemicals can be both organic or inorganic as well as in all 3 forms viz. solid, liquid or gas. Some of the precautions recommended in their storage and handling are:

1. Store these chemicals especially if they are in liquid form in well closed containers in a cool place with adequate ventilation.
2. Ensure that they do not come into contact with atmospheric oxygen, moisture etc as many of the otherwise harmless chemicals become toxic due to chemical degradation, with air and moisture.
3. There must be proper identification tags on toxic chemicals.
4. Ensure that toxic chemicals are not stored along with other chemicals particularly with those meant for human consumption such as IP/BP grade products.
5. All safety aids such as hand gloves, nose masks, fresh air mask, goggles etc should be available handy.
6. Appropriate antidotes against each of the toxic chemicals should be made available at the site.
7. MSDS should be consulted before going to handle toxic products.

7. Corrosive chemicals:

Few of the chemicals are very corrosive in nature and can cause severe blisters/deformity/loss of vision etc, if they come in contact with human body.

All personal protective equipments such as hand gloves, apron, goggles, nose mask, safety shoes should be worn when handling these chemicals. e.g.

All mineral acids (HF, HCl, HNO₃, H₂SO₄), Certain organic acids (formic and acetic acids), Alkalies (ammonium, sodium and potassium hydroxides), Chloro compounds (acetyl chloride, Thionyl chloride, mono and tri-chloro acetic acid, aluminium chloride) etc.

Alkalis like sodium hydroxide, potassium hydroxide, liquid ammonia solution can damage the eye permanently, if there is a splash and they come into contact with eye. No alkaline material should be handled without goggles and hand gloves

Safety Manual

Flame Over Circle (GHS03)

Substances which give rise to highly exothermic reactions in contact with other substances particularly flammable substances.

Flame (GHS02)

Extremely flammable liquids have a flash point less than 0° C and a boiling point less than or equal to 35° C.

Exclamation Mark & Health Hazard (GHS07, GHS08)

Substances which present moderate risks to health by inhalation, ingestion or skin absorption. Substances which are non-corrosive but are liable to cause inflammation through immediate, prolonged or repeated contact with the skin or mucous membranes.

Exploding Bomb (GHS01)

Substances which may explode under the effect of flame or heat or which are more sensitive to shock or friction than dinitrobenzene.

Skull and Crossbones (GHS06)

Substances which present a serious risk of acute or chronic poisoning by inhalation, ingestion or skin absorption.

Corrosion (GHS05)

Substances which destroy living tissue.

Environment (GHS09)

Substances which, were they enter into the environment, would present or might present an immediate or delayed danger for one or more components of the environment.

Gas Cylinder (GHS04)

Compressed, liquefied, dissolved, or refrigerated gases. Risk of explosion if heated or cryogenic burns.

Hazard Symbols and Class

EXPLODING BOMB

GHS01

Unstable explosives
Explosives of Divisions 1.1, 1.2, 1.3, 1.4
Self reactive substances and mixtures, Types A,B
Organic peroxides, Types A,B

FLAME

GHS02

Flammable gases, category 1
Flammable aerosols, categories 1,2
Flammable liquids, categories 1,2,3
Flammable solids, categories 1,2
Self-reactive substances and mixtures, Types B,C,D,E,F
Pyrophoric liquids, category 1
Pyrophoric solids, category 1
Self-heating substances and mixtures, categories 1,2
Substances and mixtures, which in contact with water, Emit flammable gases, categories 1,2,3
Organic peroxides, Types B,C,D,E,F

FLAME OVER CIRCLE

GHS03

Oxidizing gases, category 1
Oxidizing liquids, categories 1,2,3

GAS CYLINDER

GHS04

Gases under pressure:
• Compressed gases
• Liquefied gases
• Refrigerated liquefied gases
• Dissolved gases

CORROSION

GHS05

Corrosive to metals, category 1
Skin corrosion, categories 1A,1B,1C
Serious eye damage, category 1

SKULL AND CROSSBONES

GHS06

Acute toxicity (oral, dermal, inhalation), categories 1,2,3

EXCLAMATION MARK

GHS07

Acute toxicity (oral, dermal, inhalation), category 4
Skin irritation, category 2
Eye irritation, category 2
Skin sensitisation, category 1
Specific Target Organ Toxicity – Single exposure, category 3

HEALTH HAZARD

GHS08

Respiratory sensitization, category 1
Germ cell mutagenicity, categories 1A,1B,2
Carcinogenicity, categories 1A,1B,2
Reproductive toxicity, categories 1A,1B,2
Specific Target Organ Toxicity – Single exposure, categories 1,2
Specific Target Organ Toxicity – Repeated exposure, categories 1,2
Aspiration Hazard, category 1

ENVIRONMENTALLY DAMAGING

GHS09

Hazardous to the aquatic environment
Acute hazard, category 1
Chronic hazard, categories 1,2

UN HAZARD CLASSIFICATION

Class 1	Explosive
Class 2	Gases
Class 3	Flammable Liquids
Class 4.1	Flammable Solids/ self reactive solid or liquid
Class 4.2	Spontaneously Combustible/ self heating
Class 4.3	Dangerous When Wet/ water reactive
Class 5.1	Oxidising Agent
Class 5.2	Organic Peroxides
Class 6.1	Class 6.1 Poisonous/ toxic/inorganic
Class 7	Radioactive
Class 8	Corrosive
Class 9	Miscellaneous Dangerous Substance

Safety Manual

Handling of flowing Acid Accidents

1. Remove all persons from Danger zone.
2. Wash contaminated place with soap & water.
3. Apply Calcium Gluconate to affected areas.
4. Remove affected clothing.
5. Rinse eyes only with water.
6. Inform the Doctor.

Handling Unconsciousness

1. Vomiting should never be induced.
2. Start mouth-to-mouth respiration.

Handling Fire Accidents:

1. Carbon dioxide is most frequently installed in the Lab. It suffocates fire and leaves no residue.
2. Use fire extinguisher for glowing or smouldering fires.
3. Use sand for metal fire.

Handling Cuts and Scratches:

1. Carefully wash with clean water.
2. Swab with cotton wool and apply surgical spirit.
3. Apply dressings in a normal manner.
4. Obtain medical attention.

Handling Burns:

1. Remove contaminated clothing.
2. Flush gently chemical burns with plenty of cold water.
3. Cover heat burn loosely with a clear towels.
4. Do not pluck blister or remove clothing sticking to the burn.

Handling Burns:

The response of different people to the various first aid methods used to induce vomiting is by no means uniform. A simple method is that of tickling the back of the throat with two fingers or a spoon. A useful and quickly available emetic is salt water (one tablespoonful of common salt in each cupful of lukewarm water) repeated until vomiting occurs.

First Aid Items

It is suggested, as a guide, that the following items should be kept in a clearly labelled first aid box or cupboard.

1. A Sufficient number of small sterilised unmedicated dressings for injured Fingers.
2. A sufficient number of medium sized sterilised unmedicated dressings for injured hands or feet.
3. A sufficient number of large sterilised unmedicated dressings for other injured parts.
4. A sufficient number of adhesive wound dressing of an approved type and of assorted sizes.
5. A sufficient number of triangular bandages of unbleached calico, the longest side of which should measure not less than 130 cms and each of the other sides not less than 92 cms.
6. A sufficient supply of adhesive plaster.
7. A sufficient supply of absorbent sterilised cotton wool in a container of an approval type and size.
8. A sufficient supply of approved eye ointment in a container of an approved type and size.
9. A sufficient number of sterilised eye-pads in separate sealed packets.
10. A rubber bandage or pressure bandage.
11. Safety pins.

It is suggested that in addition to the above provisions, which cater primarily for cuts and heat burns, each laboratory first aid box should contain the following:

1. Eye irrigation bottle - 1/2 litre capacity.
2. Tablespoon.
3. Bottle of Common Salt.
4. Bottle of Magnesium Sulphate (Epsom Salt)
5. Bottle of Milk of Magnesia (Dose: Two tablespoonsfuls)
6. Bottle of Vinegar of Acetic Acid.

**AFTER GIVING FIRST AID
PLEASE SEEK MEDICAL ATTENTION**

Chemical Segregation

Class of Chemicals	Common Chemical Examples	Additional Concerns and Storage Recommendations	Common Incompatible Chemical Types	Possible Reaction if Mixed/Health Concerns
Corrosive Acids-Organic 	- Acetic acid - Butyric acid - Trifluoroacetic acid - Propionic acid - Formic acid - Carbonic acid - Benzoic acid	- Store in ventilated corrosives cabinet on protected shelving using secondary containment, Keep away from incompatible chemicals - Do not store under the sink - Do not store acids on metal shelving - See compatibility chart for storage	- Flammable liquids - Flammable solids - Bases - Oxidizers - Inorganic acids - Cyanides - Sulfides - Poisons/toxins	- Heat - Gas generation - Violent reaction - DO NOT POUR WATER INTO ACID - Causes skin burns - Respiratory distress - Use NIOSH approved gloves, eye protection, face shield and apron
Corrosive Acids-Inorganic 	- Nitric acid - Sulfuric acid - Phosphoric acid - Hydrochloric acid - Hydrofluoric acid	- Store concentrated nitric acid ($\geq 68\%$) and sulfuric acid ($\geq 93\%$) in a secondary container. Store in a corrosive cabinet labeled "Acid" or on shelving using a secondary containment - Do not store under the sink - Do not store acids on metal shelving - Hydrofluoric acid (HF) should only be handled by trained personnel as it requires extra handling precautions. Store in a secondary container. HF is a bone decalcifier.	- Flammable liquids - Flammable solids - Bases - Oxidizers - Organic acids - Cyanides - Sulfides - Poisons/Toxins	- Heat - Gas generation - Violent reaction - DO NOT POUR WATER INTO ACID - Hydrofluoric acid can result in skin irritation and causes burns - Respiratory distress - Use NIOSH approved gloves, eye protection, face shield and apron
Corrosive Bases-Organic / Caustic 	- Hydroxylamine - Tetramethylethylamine - Diamine - Triethylamine - Propylenediamine - Cuprietylenediamine solution - Dicyclohexylamine	Store in separate cabinet preferably with ventilation, corrosive cabinet or storage area with a spill tray, away from potential water sources (DO NOT store under sink)	- Acids - Oxidizers - Flammable liquids/solids - Inorganic bases - Poisons/Toxins - Amines are generally incompatible with isocyanates, halogenated organics, peroxides, acidic phenols, epoxides, anhydrides, and halides	- Heat - Gas generation - Violent reaction - Skin burn and irritation - Respiratory distress - Foul odor - Use NIOSH approved gloves, eye protection, face shield and apron
Corrosive Bases-Inorganic / Caustic 	- Ammonium hydroxide - Potassium hydroxide - Sodium hydroxide - Calcium hydroxide - Sodium hypochlorite solution (bleach) - Magnesium hydroxide	- Store in separate cabinet preferably with ventilation, corrosive cabinet or storage area with a spill tray, away from potential water sources (DO NOT store under the sink) - Store solutions of inorganic hydroxides in labeled polyethylene containers	- Acids - Oxidizers - Flammable liquids - Flammable solids - Organic bases - Poisons/Toxins	- Heat - Gas generation - Violent reaction - Skin burn and irritation - Respiratory distress - Use NIOSH approved gloves, eye protection, face shield and apron
Flammable Solids 	- Paraformaldehyde - Phosphorus - Magnesium - Sulfur - Potassium sulphide - Naphthalene - Camphor	- Keep in a dry, cool area away from oxidizers and corrosives - Follow specific safety procedures - Conduct work on small scale if possible - Keep amounts on - hand to a minimum - Keep away from other flammables	- Acids - Bases - Oxidizers - Poisons/toxins	- Fire hazard - Violent reaction - Generates toxic fumes - Respiratory distress - Keep away from ignition & sparks - Ignites readily, burns fiercely - Use NIOSH approved glove's, eye protection, face shield and apron

Chemical Segregation

Class of Chemicals	Common Chemical Examples	Additional Concerns and Storage Recommendations	Common Incompatible Chemical Types	Possible Reaction if Mixed/Health Concerns
Flammable Liquids 	- Ethanol - Ethyl acetate - Methanol - Acetone - Benzene - Xylene - Toluene - Diethyl ether - Tetrahydrofuran - Acetonitrile - Propanol - Gasoline	- Flammable storage cabinet or refrigerator rated for flammable/ hazardous storage/explosion proof - Peroxide-forming chemicals must be dated upon delivery and opening (two dates) i.e., di-ethyl ether, tetrahydrofuran, furan, methyl butanol, methyl acetylene, heptanol, dioxanes, diglyme - Please consult NIH Chemical Hygiene Plan Peroxide Formers	- Oxidizers - Acids - Bases - Reactive - Poisons/toxins	- Fire hazard - Heat - Violent reaction Watch for vapor mist - Causes eye and skin irritation - Keep away from ignition or sparks - Use NIOSH approved gloves, eye protection, face shield and apron
Toxic 	- Chloroform - Cyanides - Heavy metal compounds (e.g. Cadmium, Mercury, Osmium, Arsenic, Barium) - Formamide - Phenol - Carbon tetrachloride 2-Mercaptoethanol - Acrylamide - Ethidium bromide - Sodium azide solution	- Store in a dark, dry, ventilated, cool area in an unbreakable chemically resistant secondary container (polyethylene) - Store volatile toxic materials with evaporation rate above 1.0- (ether = 1.0) in flammable cabinet - Store non-volatile Liquid poisons in a refrigerator or cabinet; amounts less than 1 liter can be stored in a cabinet above bench level, ONLY if the cabinet has sliding doors (not swinging) - Sodium azide, must be kept refrigerated	- Flammable Liquids - Acids - Bases - Reactive - Oxidizers - Corrosives	- Generation of toxic and flammable gas - Combustible - Heat - Fire hazard - Explosion hazard - Violent reaction - Chloroform explosively reacts with chemically-reactive metals (e.g., aluminum or magnesium powder, sodium, and lithium), strong oxidizers, strong caustics (e.g., alkalis), and decomposes in sunlight - Some toxins are mutagenic and carcinogenic - Review your SDS before working with toxic material - Use NIOSH approved gloves, eye protection, face shield and apron
Explosives 	- Picric acid (dry) - Ammonium nitrate - Nitro urea - Trinitroaniline - Benzoyl peroxide (dry) - Trinitrobenzene - Trinitrobenzoic acid - Trinitrotoluene - Urea nitrate - Trinitrophenol - Diazoisbutylnitrile - Sodium azide (solid)	- Store in a secure location away from other chemicals; store in an area away from friction or shock - Store Picric acid in cool location or in a hazard rated fridge to prevent explosive crystallization - Storage regulations DO NOT apply to binary explosives until mixed.	- Please consult the SDS - Explosive's must be stored as "STAND ALONE" They must never be stored with any chemicals of any kind	- Explosion hazard - Violent reaction - Heat - Shock sensitive - Regular inspection may be required, to check for deposits or crystallization - Use spark proof tools - Use NIOSH approved gloves, eye protection, face shield and apron
Water Reactive 	- Sodium Metals - Lithium Metals - Potassium Metals - Sodium Borohydride - Alkali Metal Hydrides - Cesium Metal	- Store in a dry, cool area away from potential spray from fire sprinklers and other water sources (DONOT store under the sink) - Label this area for water-reactive storage - Do not store with any other chemicals	- Aqueous solutions - Oxidizers - Please consult the Safety Data Sheet (SDS)	- Heat evolution - Violent reaction when mix with water - Liberates hydrogen gas with water - Reacts violently with water - Use NIOSH approved gloves, eye protection, face shield and apron

Chemical Segregation

Class of Chemicals	Common Chemical Examples	Additional Concerns and Storage Recommendations	Common Incompatible Chemical Types	Possible Reaction if Mixed/Health Concerns
Oxidizers 	- Peroxides - Nitrates - Perchlorates - Permanganates - Sodium hypochlorite (solid) - Potassium dichromate - Chlorates - Chlorites - Chromates - Bromates - Superoxide	- Store in secondary containment separately from combustibles and flammable materials - May explosively decompose on shock, friction, or concussion - May EXPLODE ON HEATING, to form irritating toxic fumes and gases of Benzoic Acid and Carbon Monoxide. Its a strong oxidant and reacts violently with combustible, organic and inorganic acids, and reducing materials, causing fire and explosion hazard. Attacks some forms of plastics, rubber or coatings	- Combustibles - Flammable - Organic materials - Reducing agents	- Fire hazard - Gas generation - Toxic gas - Explosion hazard - Forms irritating toxic fumes - Use NIOSH approved gloves, eye protection, face shield & apron.
Peroxide Formers 	- Acrylonitrile - Iso propyl alcohol - Ethers (e.g. diethyl ether, iso propyl ether) - Acetals and ketals, especially cyclic ethers and those with primary and/or secondary alkyl groups or aldehydes (e.g. acetaldehyde, benzaldehyde) - Vinyl and vinylidene compounds - Dienes - tetrahydrofuran dioxane - Butylated hydroxy toluene (BHT)	- Store in airtight bottles, away from light and heat in a dark, cool dry area; avoid using containers with loose fitting lids and ground glass stoppers; crystallization, discoloration, and formation or deposition of layers are signs a peroxide former may have become shock sensitive. do not use or move such containers - All bottles of peroxide-forming chemicals must have the received date marked on the container; when the bottle is first opened, the container must be marked with the date opened	Always consult the Safety Data Sheet (SDS) .	- Explosion hazard - Violent reaction - Shock sensitive - Combustion (exothermic reaction) - If an old or expired container of a peroxide may forming chemical or reactive is found, do not move it. - Use proper PPE - Use NIOSH approved gloves, eye protection, face shield and apron
Carcinogens 	- Benzene - Benzadine - Methylene chloride - Carbon tetrachloride - Cadmium & compounds - Arsenic & compounds - Asbestos - Alfatoxins - Beryllium & compounds	- Label all containers as "Cancer Suspect Agents" or the equivalent - Store according to the hazardous nature of the chemical, using appropriate security when necessary	Please consult the specific SDS	- Please consult the specific SDS - Use NIOSH approved gloves, eye protection, face shield, and apron
Flammable Aerosol Cans 	- Pressurized Aerosol cans containing flammable liquid not limited to: - Acetone - Thinner - Toluene - Petroleum Distillates - Butyl Cellusolve - Xylenes - Methanol	- Content under pressure: - Store at room temperatur; or store above 120°F - Do not use near heat, sparks and open flames - Always use secondary containers when storing with other chemicals	- See incompatibles for flammable liquids - Do not store with acids, oxidizers, toxic and reactive chemicals - Use secondary container with flat surfaces for stability	- Read instructions and usage as directed - Review SDS prior to use - Use NIOSH approve gloves or PPE. Rinse skin thoroughly with soap and water - Contact emergency services for severe skin impact or eye exposure - Use fire extinguisher in case of fire or dial 101

Chemical Segregation

Class of Chemicals	Common Chemical Examples	Additional Concerns and Storage Recommendations	Common Incompatible Chemical Types	Possible Reaction if Mixed/Health Concerns
Non-Flammable Corrosive-Toxic Aerosol Cans 	Pressurized aerosol cans NOT containing flammable liquid but not limited to corrosive or toxic carrier: - Ammonia - Sodium hydroxide - Sodium hypochlorite - Amines	Content under pressure: - Store at room temperature - Do not use near heat, sparks and open flames - Always use secondary containers when storing with other chemicals	- See incompatibles for corrosive acid, base and toxic items above - Use secondary container with flat surface for stability	- Read instructions and usage as directed - Review SDS prior to use - Use NIOSH approved gloves or PPE. Rinse skin thoroughly with soap and water - Contact emergency services for severe skin impact or eye exposure - Use fire extinguisher in case of fire or dial 101
Teratogens 	- Tegretol - Aminopterin - Chlorobiphenyls - Coumarins - Tetracycline - Tapazole - Propylthiouracil (PTU)	- Label all containers as "Suspect Reproductive Hazard" or "Reproductive Effector" - Store according to the hazardous nature of the chemical, using appropriate security when necessary	- Aniline is incompatible with nitric acid and hydrogen peroxide - Please consult the specific SDS	- Please consult the specific SDS - Use NIOSH approved gloves, eye protection, face shield, and apron
Toxic Compressed Gases 	- Carbon monoxide - Hydrogen dioxide - Arsenic - Pentafluoride - Boron tribromide - Bromine - Chlorine - Fluorine - Chloropicrin - Cyanogen	- Handle toxic compressed gases in a chemical fume hood - Must be secured in upright position, bonded or chained against the wall - Indoor storage or use of toxic compressed gases shall be provided with a gas cabinet, exhausted enclosure, or gas room - Refer to the SDS information for additional guidance on the storage and compatibility requirements	- Flammable compressed gases - Oxidizing compressed gases - Please consult the specific SDS	- Release of toxic gas - Hydrogen sulfide is a colorless, flammable, extremely hazardous gas with a "rotten egg" smell; - Prolonged exposure may cause nausea, tearing of the eyes, headaches or loss of sleep, or bronchial constriction in some asthma patients - Possible fatigue, loss of appetite, headache, irritability, poor memory, dizziness and slight conjunctivitis - Use NIOSH approved gloves, eye protection, face shield, & apron - Wear safety shoes

Chemical Segregation

Class of Chemicals	Common Chemical Examples	Additional Concerns and Storage Recommendations	Common Incompatible Chemical Types	Possible Reaction if Mixed/Health Concerns
Flammable Compressed Gases  	- Methane - Acetylene - Butane - Propane - Hydrogen - Silane - Ethane - Arsine - Germane	- Handle flammable compressed gases in a chemical fume hood - Store in well-ventilated areas; store away from oxidizers, open flames, sparks, and other sources of heat ignition; post NO SMOKING signs around storage area(s) or entrance(s) to storage room(s); flammable gases stored outdoors where ambient temperatures exceed 125 degrees F (51.7 degrees C) shall be protected from direct sunlight - Must be secured in upright position, bonded or chained against the wall - Use a spark proof wrench to attach regulators and make other connections; install a flame/flash arrestor at the regulator outlet flow valve	- Oxidizers - Toxic compressed gases	- Fire hazard - Explosion hazard - Use NIOSH approved gloves, eye protection, face shield and apron - Wear safety shoes
Oxidizing Compressed Gases  	- Oxygen - Chlorine - Fluorine - Nitrogen oxides Gas mixtures containing oxygen higher than atmospheric concentrations (above 23%)	- Store oxidizers separately from flammable gas containers or combustible materials; minimum separation requirement from these materials is 20 ft. or a 5 ft. noncombustible barrier with a fire resistance rating of at least 30 minutes - Must be secured in upright position, bonded or chained against the wall - Clean equipment used for Oxygen and Nitrous Oxide with Oxygen compatible materials free from oils, greases and other contaminants - Fluorine shall be handled in specially passivated containers and associated equipment	- Flammable compressed gases - Toxic compressed gases	- Fire hazard - Explosion hazard - Use NIOSH approved gloves, eye protection and apron - Wear safety shoes

Terms & Conditions of Sale

Prices: The prices for Goods shall be those set forth in this price list(s), less any negotiated discounts otherwise agreed in writing between the parties. All prices for the Goods are net delivery, insurance costs and applicable taxes, for which the Buyer shall be additionally liable.

The prices are subject to change without any notice.

Acceptance of any order sent by the Purchaser is entirely at our sole discretion. Acceptance of any order sent by the Purchaser is entirely at our sole discretion.

Taxes: GST will be charged extra as and when applicable. In lieu of certain tax payments, buyer may provide a tax exemption certificate acceptable to the taxing authorities.

Availability: If an item ordered is out of stock, we will inform the buyer and endeavor to supply the item as soon as possible. All items in this catalogue are subject to availability. From time to time products may be discontinued or withdrawn from sale without prior notice.

Delivery: Unless otherwise agreed, all deliveries of the Goods shall be made EXWORKS.

For orders over Rs. 25000/- (not including applicable taxes or surcharges), delivery of the Goods will be made on FOR destination basis.

We shall also not be liable for delay in delivery if the Buyer fails to fulfill all the preliminary conditions, which are necessary to the execution of the order.

Delivery dates are approximate and are not binding. We do not accept liability for any loss arising from delay in delivery of products.

Certain products listed in this catalogue requires End-Use-Certificate, permit and storage license, the buyer must ensure to submit the same along with the purchase order otherwise order will not be executed.

Damage or Shortage: All products are packed with utmost care & forwarded at customer's risk. No claim for shortage / breakage, delay or damage will be entertained after the goods have left our premises.

No goods should be returned without prior written consent. Products should be stored in required conditions protected from temperature, humidity etc.

Amendment / Cancellation: No amendment or cancellation of orders will be accepted once the goods have been packed for dispatch.

Insurance: Consignment can be insured at buyers request and at their cost, if instruction in this behalf are received with order. In the event of loss or damage in transit, the buyer must file its own claim with carrier. Insurance Charges are normally 1.5% of the invoice value and taxes as applicable.

Health & Safety: The buyer has a responsibility to ensure all goods supplied are stored and used responsibly and in accordance with all the appropriate legislation requirements and recommendations. The buyer is responsible for taking all steps necessary to eliminate or reduce the risk to health and/or safety arising from the possession, storage and use of the goods. The products listed in this catalogue are intended for laboratory research or manufacturing use, and are not for any other purpose, including but not limited to, use in food or drink for human consumption, in pharmaceuticals or in medical devices.

Goods return: In case of failure or rejection of our products whatsoever reasons, our liability is expressly limited to the extent of its replacement or its cost. Rejection complaints should be made within 30 days of our invoice date. We shall not be responsible for any other damage or losses directly or indirectly.

Force Majeure: We shall not be liable for any delay or non-delivery of any of the Products due to event beyond our control, such as: Act of God, explosion, flood, tempest, fire or accident; war or threat of war, sabotage, insurrection, civil disturbance or requisition; acts, restrictions, regulations, bye-laws, prohibitions and measures of any kind on the part of any governmental, parliamentary or local or foreign authority; import or export regulations or embargoes; strikes, lock-outs, or other industrial actions or trade disputes (whether involving employees of the Seller or of a third party); difficulties in obtaining raw materials, labour, fuel, parts of machinery; power failure or breakdown in machinery; acts or omissions of the Buyer; any other event beyond our reasonable control.

Standard packing for Solvents: 20 x 500 ml, 4 x 5 lit, 4 x 2.5lit, 12 x 1 lit

Standard packing for Acids: 16 x 500 ml, 12 x 1 lit, 4 x 2.5 lit, 2 x 5 lit, 4 x 5 lit

ALL DISPUTES ARE SUBJECT TO MUMBAI JURISDICTION.

SPECIAL PRICES WILL BE OFFERED FOR BULK ENQUIRIES.

THIS PRICE LIST CANCELS ALL OUR PREVIOUS LISTINGS
