ABOUT H.P.L.C.

Established in 2009, High Purity Chemicals Private Limited (HPLC), under the pioneering leadership of Mr. S. K. Aggarwal, an extremely visionary second generation entrepreneur having 41 Years of experience in Product Development, Marketing & Administration, HPLC has emerged as one of the leading and most-trusted brand producing and distributing high quality Organic and Inorganic Laboratory Fine Chemicals.

We proudly announce that our manufacturing facility is now WHO-GMP certified and accredited with ISO 9001:2015, ISO 14001:2015, OHSAS 18001:2007 & CE Certified.

Presently, we are marketing over 4,500 Products.

Below are the factors that distinguish us in the competitive market :

- Consistent Quality
- Safe and effective packaging
- Timely delivery of consignment
- International standards
- Economical Prices
- Customer Support

We have been catering to the needs of varied industries such as:

- Pharmaceuticals
- Dyes & Intermediates
- Dairy Products
- Agrochemicals
- Hospitals
- R&D Establishments
- Testing Laboratories
- Paints & Pigments
- Cosmetics & Perfumery
- Minerals & Metals
- Foods
- Educational Institutes
- Government Institutes & Universities

Being the most trusted brand in chemical industry's we are committed to provide stringent quality products with great customer satisfaction.

Our GMP Compliant State-of-the-art Plant is situated at SARIGAM (Gujarat), spread over 2.5 acres of land with constructed area of 1,40,000 sq. ft.

HPLC manufacturing facility is situated at Sarigam, Gujarat (INDIA).

The plant is spread over 2.5 acres of land with constructed area of 1,40,000 sq.ft.

Our manufacturing facility includes sophisticated machineries and equipment for distillation and purification of different kind of solvents.

We primarily focus on procuring high grade raw material for manufacturing in order to match up with highest global standards.

The facility is designed to utilize over 7000 Liters distillation units with the batch volumes varying from few liters to 1600 Liters.

Our facility has a state-of-the-art distillation equipment range from 1600 Liters to 20 Liters including both SS and glass.

SOLID PRODUCTION UNIT

HPLC manufacturing facility consist of research engineering, product manufacturing, testing laboratory and In-house R&D department that has always enabled us to keep ahead of our competitors in the market.

The consolidated manpower in our manufacturing unit is comprising of skilled and dedicated workforce, qualified & experienced chemical engineers.

We regularly keep upgrading our facility to keep abreast with latest international trend and manufacture best quality of products.

We create awareness among the employees and take appropriate measures for safety of the environment and minimize potential risk and impact.

All the products are packed with ultimate care to ensure safe delivery of goods to the desired destination under the supervision of our delivery managers.

QUALITY POLICY

At HPLC, before all other things, our customer comes first. Customer satisfaction is more than our daily mantra — it is the reason for everything we do.

Being a quality driven organization, we are committed to deliver only quality range of products to our valued clients. We have a well-defined quality management system, where in our quality monitors keep an active check on the whole manufacturing process. It is why we combine our excellent industry expertise with a commitment to create the best and thus strive for superior economic performance through improved productivity and high quality ingredients.

QUALITY CONTROL (Q.C.)

Our quality control department is equipped with state-of-the-art and latest testing instruments, some of them are:

- Gas chromatograph
- UV Spectrophotometer
- Atomic Absorption Spectrophotometer
- Digital Automatic Karl Fischer apparatus
- High speed Centrifuges
- Conductivity Meter
- Melting point apparatus
- Micro Ovens/Ovens
- pH Meters
- Refractometer
- Rotary flask shaker
- Electrophoresis equipment
- Digital analytical balances
- Laminar Air flow
- Autoclaves
- Antibiotic zone reader
- Incubator for Bacteriological
- BOD Incubator
- Colorimeter
- Cyclomixer
- Gel Strength indicator
- Muffle Furnaces
- Melting point apparatus Microscopes
- Water bath Rectangular Polarimeter
- Flame photometer

CERTIFICATION

The **CE** marking is the manufacturer's declaration that the product meets the requirements of the applicable EC directives or Regulations. **We are fully REACH compliant under EU regulation no. 1907/2006.** REACH is a EU regulation concerning the Registration, Evaluation, Authorization and Restriction of Chemicals (EC no. 1907/2006). The purpose of this regulation is to ensure a high level of protection of human health and the environment. At present we are required to supply information on the safe use of such substances by way of safety data sheets.

Our technology driven initiatives are supported by state of the art WHO - GMP certified production facility at Sarigam, Gujarat. According to World Health Organization (WHO), Good Manufacturing Practice (GMP) is a system for ensuring that products are consistently produced and controlled, according to quality standards.

We are now ISO 9001:2015, ISO 14001:2015 & OHSAS 18001:2007 Certified for its quality management, environmental and EH&S systems which means we have established an integrated management system according to the international standards, covering the areas of quality, environment, health and safety.

QUALITY DESIGNATIONS

Laboratory Reagents & Extra Pure (LR & EP):

These consist of wide range of organic and inorganic reagents in preparative chemistry and other related industries. Careful control ensures that a consistently high defined quality is maintained throughout.

Analytical Reagents (AR):

These chemicals are useful in sophisticated analytical instruments and research work, where high purity is essential. The trace impurities in these products are restricted to the lowest possible limits for the utmost precision in laboratory work.

Electronic Grade (EL):

These chemicals have very stringent limits for metallic impurities as required by the Electronic Industry.

Microbiology:

Products have been specially purified and tested for their microbiological applications.

Purified:

Purified commercial products used in many chemical laboratories.

Biochemical:

These are high purity chemicals specially manufactured and tested for Biochemical research. As required heavy metal content is carefully monitored and reduced to minimum possible levels. Our range includes amino acid and their derivatives, carbohydrates and their derivatives, enzymes, enzymes substrates etc.

Buffers:

Buffers are provided in capsule form, powder form as well as solution form to work in varying pH ranges in chemicals. We also offer wide range of Biological Buffers.

Highly Process Liquid Chromatography (HPLC) & Spectroscopy Grade Solvents:

An extensive range of highly characteristic HPLC solvents are produced and tested as per the latest techniques to assure interference-free HPLC separation and detection. Key parameters such as UV absorbance, transmittance, non volatile matter, moisture content, fluorescence impurities and assay are very carefully controlled.

Diagnostic Reagents:

These are specially produced for the use of various hospitals, clinical, & pathological laboratories for diagnostic purpose.

Indicator powder, solution & paper:

Various types of indicators such as absorption indicator, metal ion indicators, redox indicators of high purity are provided as powder as well as ready to use liquid forms for analytical purpose. Papers indicators are produced using "Whatman" filters papers. pH papers cover both narrow and wide range pH from 1-14.

AAS (Atomic Absorption Standard) Solution:

These standards solution are used as reference standards for calibration of the instruments in Atomic Absorption Spectroscopic Analysis.

ICP (Inductively Coupled Plasma):

These standards solution one used as reference standards for calibration of the instrument in Inductively coupled Plasma Analysis

Tech / Pract:

General, commercial grade for synthesis and routine applications.

Dried:

Products containing highly reduced water content for anhydrous reactions, synthesis and assay studies.

GC:

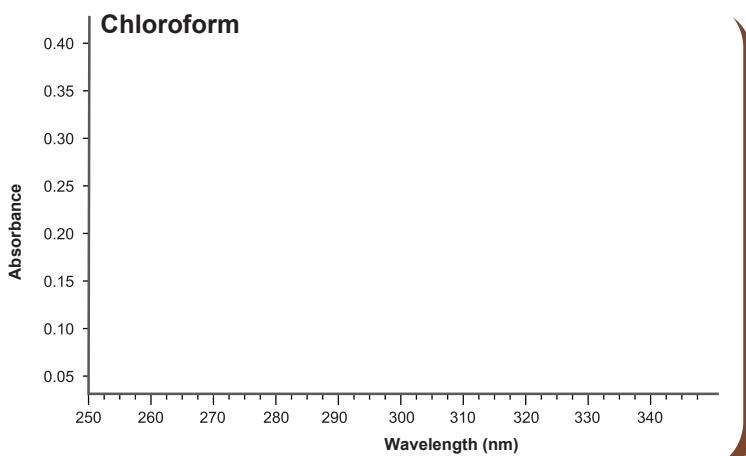

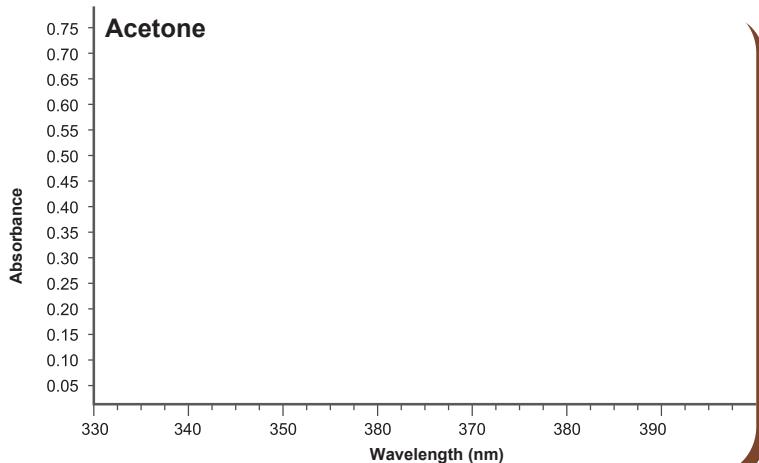

For Gas Chromatography applications and suited for use in GC instrument.

SCINTILLATION:

Ideal for scintillation studies

HIGH PURITY LIQUID CHROMATOGRAPHY (HPLC)

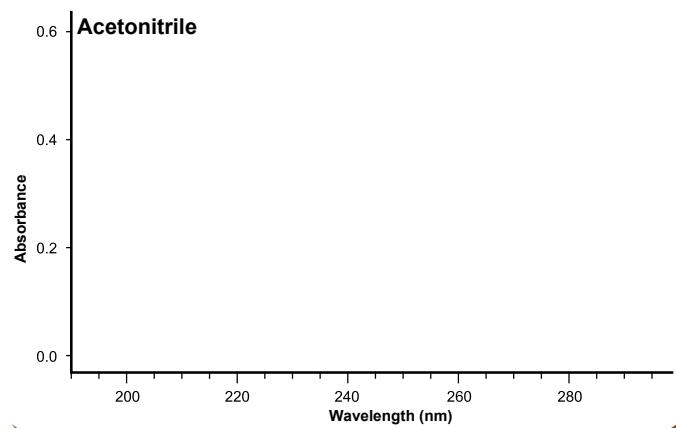

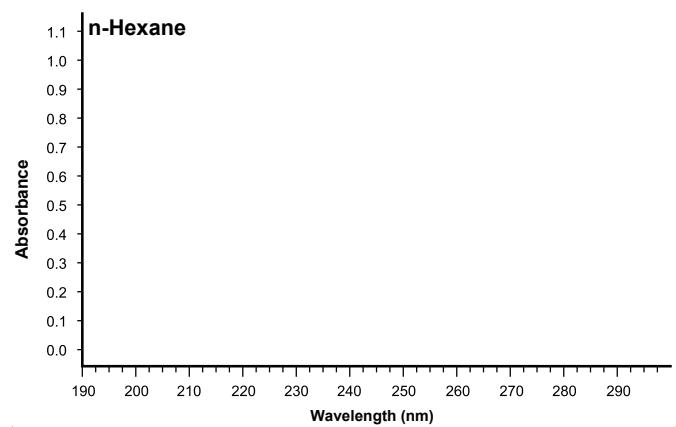

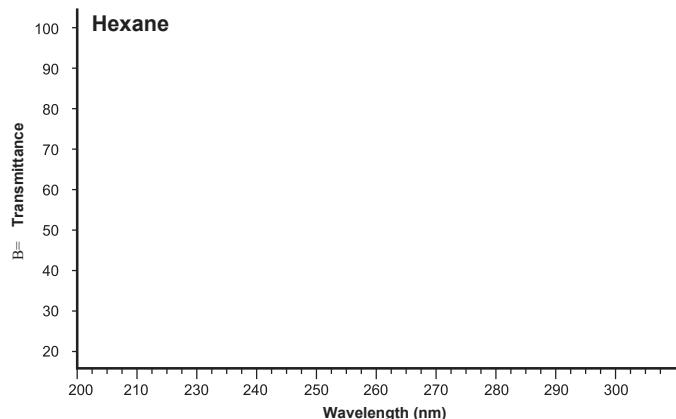

- Solvent are carefully analysed to limit of UV absorption
- All our HPLC solvent are packed under Nitrogen for its better resistance and bottles are sealed with teflon liner to prevent contamination
- Solvent particles are much smaller than conventional liquid solvents. Columns are operated at a very high pressure to maintain high quality standards.

GLOBAL MARKETING NETWORK

HPLC have established effective marketing network in India as well as abroad, presently we distribute our products and services to more than 10 countries across the world, both directly and through business partners.

The distribution channel consists of 100 distributors, stockiest and retailers across the world.

We encourage new distributors to become part of our ever-growing family and also offer several of our products on an OEM basis and look forward to working with our business collaborators toward a mutually beneficial partnership.

LABORATORY CLEANING AGENTS

THE IDEAL SOLUTION FOR CLEANING OF LABORATORY EQUIPMENTS

SUPER LAB® CLEAN

CODE	PRODUCT NAME	CONCENTRATION OF USE	pH	NOTES FOR USE
028823	Super Lab Clean MA 01 Alkaline	2 - 5%	11.6 - 12.0	Universal cleaning agent for heavy contamination. For hard water even up to 40 d. For cleaning tablets, tiles, & floors in the laboratory. Tested for radioactive decontamination. Suitable for ultrasonic cleaning.
028824	Super Lab Clean MA 02 Neutral	2 - 5%	7.2 - 7.5	Special cleaner for precision instruments of glass, quartz & sensitive metals. Suitable for ultrasonic cleaning.
028825	Super Lab Clean MA 03 Phosphate-Free	2 - 5%	11.6 - 12.0	Universal cleaning agent for heavy contamination. With very hard water add demineralized water. Environmentally acceptable as it contains no phosphate. Suitable for ultrasonic cleaning.
028835	Super Lab Clean MA 04 Nuetral	2 - 5%	6.5 - 8.5	Special cleaning of equipment made of alkali sensitive metals & alloys with the same properties, as well as quartz and glass precision measuring equipment contains oils and polymers.

TEEPOL®
AVAILABLE PACKS: 500 ml & 5 L Pack

TEEPOL® IN THE LABORATORY

APPLICATION	CONCENTRATION	REMARKS
Chemical glassware in bulk e.g. bottles flasks beakers tubing metal or porcelain dishes.	0.5% (5 ml per litre)	Use hot water if possible for best results.
Sinks, wash basins, large porcelain containers.	0.3% (5 ml per litre)	Apply with drop rag or cloth.
Microscope slides, delicate pieces of apparatus fine wire mesh sieves.	0.3 - 0.6% (3 ml - 6 ml per litre)	Cold water can be used.
General wetting	1.1% - 0.2%	Varies with job.
Rough cleaning floors, walls laboratories etc.	5 ml per litre of Warm water	Apply to brush or mop.
Benches racks, shelves enamel work and painted surfaces.	3 ml - 6 ml per litre of Warm water	Quite safe for high glass finishes. Use cold water for wood work to avoid softening.
Degreasing of metal parts.	6 ml - 12 ml per litre of hot water	Alkalies may be used in conjunction with teepol except where they are likely to cause corrosion.

Terms & Conditions of Sale

Prices: The prices for Goods shall be those set forth in this price list(s), less any negotiated discounts otherwise agreed in writing between the parties. All prices for the Goods are net delivery, insurance costs and applicable taxes, for which the Buyer shall be additionally liable.

The prices are subject to change without any notice.

Acceptance of any order sent by the Purchaser is entirely at our sole discretion.

Taxes: GST will be charged extra as and when applicable. In lieu of certain tax payments, buyer may provide a tax exemption certificate acceptable to the taxing authorities.

Availability: If an item ordered is out of stock, we will inform the buyer and endeavor to supply the item as soon as possible. All items in this catalogue are subject to availability. From time to time products may be discontinued or withdrawn from sale without prior notice.

Delivery: Unless otherwise agreed, all deliveries of the Goods shall be made EXWORKS.

For orders over Rs. 25000/- (not including applicable taxes or surcharges), delivery of the Goods will be made on FOR destination basis.

We shall also not be liable for delay in delivery if the Buyer fails to fulfill all the preliminary conditions, which are necessary to the execution of the order.

Delivery dates are approximate and are not binding. We do not accept liability for any loss arising from delay in delivery of products.

Certain products listed in this catalogue require End-Use-Certificate, permit and storage license, the buyer must ensure to submit the same along with the purchase order otherwise order will not be executed.

Damage or Shortage: All products are packed with utmost care & forwarded at customer's risk. No claim for shortage / breakage, delay or damage will be entertained after the goods have left our premises.

No goods should be returned without prior written consent. Products should be stored in required conditions protected from temperature, humidity etc.

Amendment / Cancellation: No amendment or cancellation of orders will be accepted once the goods have been packed for dispatch.

Insurance: Consignment can be insured at buyers request and at their cost, if instruction in this behalf are received with order. In the event of loss or damage in transit, the buyer must file its own claim with carrier. Insurance Charges are normally 1.5% of the invoice value and taxes as applicable.

Health & Safety: The buyer has a responsibility to ensure all goods supplied are stored and used responsibly and in accordance with all the appropriate legislation requirements and recommendations. The buyer is responsible for taking all steps necessary to eliminate or reduce the risk to health and/or safety arising from the possession, storage and use of the goods. The products listed in this catalogue are intended for laboratory research or manufacturing use, and are not for any other purpose, including but not limited to, use in food or drink for human consumption, in pharmaceuticals or in medical devices.

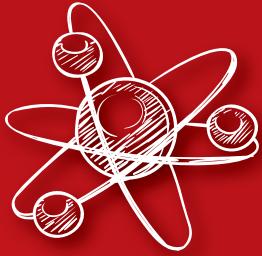

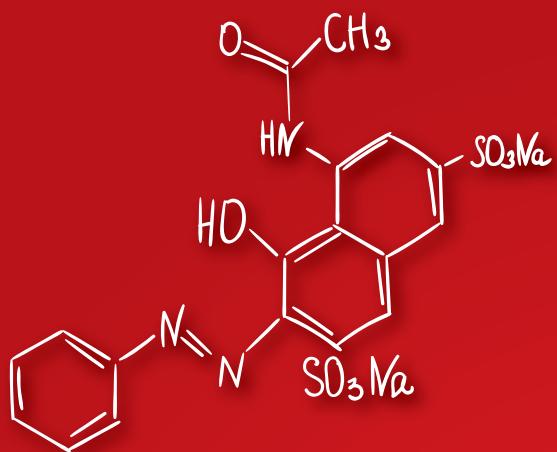

Goods return: In case of failure or rejection of our products whatsoever reasons, our liability is expressly limited to the extent of its replacement or its cost. Rejection complaints should be made within 30 days of our invoice date. We shall not be responsible for any other damage or losses directly or indirectly.

Force Majeure: We shall not be liable for any delay or non-delivery of any of the Products due to event beyond our control, such as: Act of God, explosion, flood, tempest, fire or accident; war or threat of war, sabotage, insurrection, civil disturbance or requisition; acts, restrictions, regulations, bye-laws, prohibitions and measures of any kind on the part of any governmental, parliamentary or local or foreign authority; import or export regulations or embargoes; strikes, lock-outs, or other industrial actions or trade disputes (whether involving employees of the Seller or of a third party); difficulties in obtaining raw materials, labor, fuel, parts of machinery; power failure or breakdown in machinery; acts or omissions of the Buyer; any other event beyond our reasonable control.

Standard packing for Solvents: 20 x 500 ml, 4 x 5 lit, 4 x 2.5lit, 12 x 1 lit

Standard packing for Acids: 16 x 500 ml, 12 x 1 lit, 4 x 2.5 lit, 2 x 5 lit, 4 x 5 lit

KIT024 CALCIUM HARDNESS TESTING KIT**TEST: 100****M.R.P. : RS. 1530.00**

- Take 25 ml of water sample in the test bottle (No-1)
- Add 10drops of Calcium Hardness reagent-2 (CH-2) and mix.
- Add 10drops of Calcium Hardness reagent-3 (CH-3) and mix.
- Add some Calcium Hardness reagent-3 (CH-3) and mix until a distinct pink colour develops.
- For Hard/Soft water: add Calcium Hardness reagent-4(CH-4),shake well after each drop until the colour changes from pink to purple.
Count the no. of drops of CH-4 required for colour change.
Calcium Hardness = no. of drops of CH-4 x5 (ppm interms of CaCO_3)

KIT026 RESIDUAL CHLORINE TESTING KIT**TEST: 200****M.R.P. : RS. 504.00**

- Take 5ml of water sample in the test bottle(No-1)
- Add 5 drops of Residual Chlorine reagent-1 (RC-1) and mix well.
- The colour is compared with the Residual Chlorine colour chart and record the residual chlorine value.

KIT022 ARSENIC TESTING KIT**TEST: 25****M.R.P. : RS. 2808.00**

- Take 50ml of water sample in the mouth bottle.
- Add 1 gm of Arsenic reagent-1(As-1) and 10 gm of Arsenic reagent-2(As-2).
- Followed by 10 ml of Arsenic reagent-3(As-3).
- The glass tube fitted with Mercuric Chloride paper and Lead Acetate wool is placed in position.The apparatus is kept in a water bath at 40-60°C /40 minutes.
Take carefully the Mercuric Chloride paper from the apparatus and the stain produced is compared with the Arsenic colour chart immediately and record the Arsenic value.
The Mercuric Chloride paper used in the test should not be exposed to bright sunlight.

KIT028 DISSOLVED OXYGEN TESTING KIT**TEST: 25****M.R.P. : RS. 4230.00**

- Take 300 ml of water sample in the test bottle(No-1).
- Add 2ml of Dissolved Oxygen reagent-1(DO-1) very carefully and tip of the filler is dipped well below the water level.
- Add 2 ml of Dissolved Oxygen reagent-2(DO-2) very carefully and tip of the filler is dipped well below the water level.
- Replace the stopper without inclusion of any air bubble and thoroughly mix the content by shaking the test bottle (No-1) several times and allow the precipitate formed to settle.
- After 2-3 minutes of settling,carefully remove the stopper and immediately add 2 ml of Dissolved Oxygen reagent-3(DO-3) very carefullyby running the reagent down the neck of bottle and mixed thoroughly to dissolve the precipitate settled completed.
- Take 200 ml of the solution in an iodine flask (No-2) and add 4 drops of Dissolved Oxygen reagent-4(DO-4).
- Titrate with Dissolved Oxygen reagent-5(DO-5) taken in a 10ml syringe until the colour changes from blue to colourless.
Dissolved Oxygen (Mg/L or ppm) = Volume of Dissolved Oxygen reagent-5(DO-5)

KIT020 TOTAL ALKALINITY & pH TESTING KIT**TEST: 2 x 200****M.R.P. : RS. 1152.00**

- Take 25ml of water sample in the test bottle (No-1).
- Add 4-5 drops of Total Alkalinity Reagent-2 (TA-2) and mix until an orange yellow colour develops.
- Add Total Alkalinity Reagent-1 (TA-1),shake well after drop until the colour changes from orange yellow to orange red.
- Count the no. of drops of TA-1 required for colour change.
Total Alkalinity = no. of drops of TA-1 x 5 (ppm in terms of CaCO_3)

pH :

- Take 10ml of water sample in the test bottle (No-1).
- Add 3-4 drops of pH Reagent-1 (pH-1) and mix well.
- The colour is compared with the pH colour chart

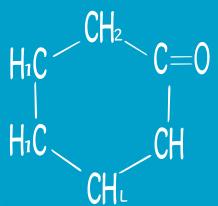

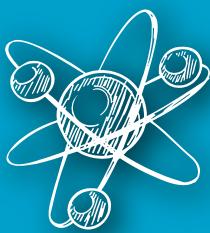

KIT030 TOTAL HARDNESS TESTING KIT**TEST: 200****M.R.P. : RS. 1152.00**

- Take 25ml of water sample in the test bottle (No-1).
- Add 10 drops of Total Hardness reagent-1 (TH-1)
- Add 5 to 6 drops of Total Hardness reagent-2 (TH-2) and mix until pinkish colour develops.
- For Soft water: add Total Hardness reagent-3(TH-3),shake well,until colour changes from pink to blue. Count the no. of drops of TH-3 required for colour change.
Total Hardness= no. of drops of TH-3 x 2 (ppm in terms of CaCO_3)
- For Hard water: add Total Hardness reagent-4(TH-4),shake well , until colour changes from pink to blue. Count the no. of drops of TH-4 required for colour change.
Total Hardness= no. of drops of TH-4 x 5 (ppm in terms of CaCO_3)
- For much Hard water (as river water,sea water,etc.): add Total Hardness reagent-5(TH-5), shake well, until colour changes from pink to blue.
Count the no. of drops of TH-5 required for colour change.
Total Hardness= no. of drops of TH-5 x 50 (ppm in terms of CaCO_3)

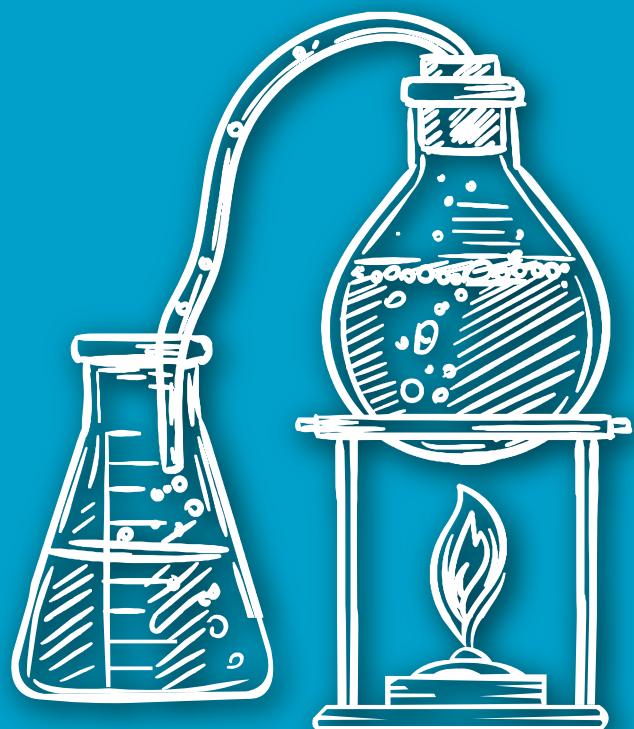

KIT010 ALIZARIN TESTING KIT**TEST: 200****M.R.P. : RS. 603.00**

(For the detection of Acidity and Heat Stability of Milk)

- Place 2 drops of milk on the glass plate and add 2 drops of Alizarin Red-S solution.
- Mix the contents with the glass rod thoroughly.
- Note the colour of the mixture and presence of any flakes or clots.
- The presence of a flake or clot indicates a positive test.
- Milk showing positive test is not suitable and not considered for the manufacture of evaporated milk.

NANOTECHNOLOGY PRODUCTS

In the recent years the demand for nanotechnology products has increased drastically because of its wide range of potential applications. In keeping with such trend, HPLC takes a further leap to take the initiative in related industries. We offer nano particles, nano powder and carbon nanotubes in lab scale for researchers and in bulk for industrial demand.

Carbon Nano Tubes (CNT)

Carbon nanotubes is a core fundamental material of the nano technology. It has high electric and mechanical properties that allow application to various areas. It shows a unique combination of stiffness, strength, and tenacity compared to other fiber materials which usually lack one or more of these properties.

Properties of CNT :

- Excellent electric and heat conductor
- Fibrous substance with high aspect ratio
- High - strength and high - elasticity material based on the graphite crystal

Structure

- High specific surface area
- Environment-friendly and lightweight material consisting of carbon

Applications

- | | |
|-------------------------------------|------------------------------------|
| • Composite material | • Conducting paints |
| • Energy storage | • Conductive transparent electrode |
| • Chemical sensors | • Conductive Nano ink, Nano device |
| • Conductive heating film | • Nano bio material |
| • Flat-panel displays | • Stronger Fibers |
| • Chemical sensor for harmful gases | |
| • Batteries with better lifetime | |

Nanotechnology Product Applications :

We believe Nanotechnology have huge potential and will drive major future improvements in production and technology.

Safety Manual

Storage and Handling of Hazardous chemicals

As a large number of materials of different nature are to be stored in process industries, warehouses, laboratories etc. it is highly essential that these are stored safely and properly and a high sense of good house keeping practice is to be maintained. For the purpose of safe storage, these chemicals can be classified into different groups, based on their chemical characteristics.

1. Incompatible chemicals:

These are chemicals, which remain harmless if stored in isolation, but upon allowing to come into direct contact could pose severe fire explosion hazards.

Some of this type are:

i. Con. H_2SO_4	vs	KMnO_4
ii. Glycerol	vs	KMnO_4
iii. Acetone, Methanol, Glycerine.	vs	CrO_3
iv. Con. HNO_3	vs	Alcohols, Ketones, Ethers
v. Sodium metal	vs	H_2O
vi. Sodium hydride	vs	H_2O
vii. Hydrogen peroxide	vs	Flammable Organic Solvents

In all the above cases instant fire will take place due to high amount of heat produced as a result of the vigorous reaction between these compounds.

2. Explosive chemicals:

These are chemicals which under certain conditions of heat, pressure, shock etc. undergo rapid decomposition, evolving large volumes of gas and heat, which in turn further heats up the surrounding air to expand so rapidly that the entire process ends up in what is called explosion. e.g.

Nitrates (ammonium nitrate), Persulphates (ammonium persulphate), Peroxides (hydrogen peroxide), Permanganates (potassium permanganate), Perchlorates (ammonium / sodium / potassium), Dichromates (ammonium), Hydroxylamines and their salts, Azides (sodium azide) etc, etc.

Some of the recommendations for their storage are:

1. All chemicals falling under this category should be stored in a separate block, away from the main building.
2. Before storing these materials it should be ensured that the relevant MSDS is available.
3. Ensure that the environment conditions such as temperature, RH etc. is compatible to the stability of the product.
4. Avoid storage for prolonged periods.
5. Proper material handling equipments should be used during transportation from one location to another.
6. Rough handling, dragging of the containers, stacking at higher levels thus creating more strain on the bottom containers etc should be avoided.

7. No attempt should be made to scrap out the material with any metal object nor should it be pulverized or powdered.
8. Disposal of explosive chemicals should be done only as per the procedure laid down in the MSDS or as per the manufacturers instruction.

3. Oxidising agents:

Since oxidising agents are capable of generating oxygen by way of heat, chemical decomposition or by interaction with other incompatible materials, they help fire to ravage even in the absence of atmospheric air or oxygen. Following categories of chemicals are considered to be most powerful oxidizers and these are to be handled very cautiously. e.g.

Peroxides, Persulphates, Perchlorates, Periodates, Permanganates, Bromates, Nitrates, Chromates, Dichromates, Perborates, etc.

As a general rule all flammable solvents must be stored away from oxidizing chemicals and these should never be allowed to come into contact with each other. Also it is advisable to store the oxidizing chemicals separately, having adequate ventilation and cooling arrangement since most of these chemicals are susceptible to thermal decomposition.

4. Flammable chemicals:

Combustible materials can be of all the 3 types viz. solids, liquids or gases although the rate of fire propagation is different for each type, it is least in the case of solids, however it is much faster in case of liquid and still much faster in case of gases.

Some of the recommendations for storage are:

1. All flammable solvents must be placed in a cool place under shelter with proper ventilations.
2. The containers should be properly closed and should not be leaking/damaged condition.
3. No hot jobs such as welding, gas cutting, grinding or any other source of ignition such as naked flame, smoking etc should not be allowed in and around the storage area.
4. No electrical equipments and fixtures must be avoided in the storage block, if installed they should be flameproof in nature and earthing should be provided.
5. Adequate fire fighting equipments should be available at strategic locations to handle emergency.
6. Proper colour coding should be implemented for correct identification.

5. Water sensitive chemicals:

There are many chemicals which are highly reactive with water/moisture. Upon contact with water they react violently resulting in fire/chemical splash. These are to be stored in leak proof water tight containers in a dry place or dry sand beds preferably which act as good adsorbant in case of leakage. e.g. metallic elements such as sodium, potassium, rubidium, magnesium, lithium etc. metal salt such as Acetic anhydride, Calcium hydride, Sodium metal, Sodium hydride, Con. Sulphuric acid, Nitrides, sulphides, carbides, borides etc. organic chloro compounds such as Acetyl chloride, Aluminium chloride, Thionyl chloride etc. Only recommended fire fighting agents such as Dry powder, CO₂ should be used in the affected area.

6. Toxic chemicals:

These chemicals can be both organic or inorganic as well as in all 3 forms viz. solid, liquid or gas.

Some of the precautions recommended in their storage and handling are:

1. Store these chemicals especially if they are in liquid form in well closed containers in a cool place with adequate ventilation.
2. Ensure that they do not come into contact with atmospheric oxygen, moisture etc as many of the otherwise harmless chemicals become toxic due to chemical degradation, with air and moisture.
3. There must be proper identification tags on toxic chemicals.
4. Ensure that toxic chemicals are not stored along with other chemicals particularly with those meant for human consumption such as IP/BP grade products.
5. All safety aids such as hand gloves, nose masks, fresh air mask, goggles etc should be available handy.
6. Appropriate antidotes against each of the toxic chemicals should be made available at the site.
7. MSDS should be consulted before going to handle toxic products.

7. Corrosive chemicals:

Few of the chemicals are very corrosive in nature and can cause severe blisters/deformity/loss of vision etc, if they come in contact with human body.

All personal protective equipments such as hand gloves, apron, goggles, nose mask, safety shoes should be worn when handling these chemicals. e.g.

All mineral acids (HF,HCl,HNO₃,H₂SO₄), Certain organic acids (formic and acetic acids), Alkalies (ammonium, sodium and potassium hydroxides), Chloro compounds (acetyl chloride, Thionyl chloride, mono and tri-chloro acetic acid, aluminium chloride) etc.

Alkalies like sodium hydroxide, potassium hydroxide, liquid ammonia solution can damage the eye permanently, if there is a splash and they come into contact with eye. No alkaline material should be handled without goggles and hand gloves

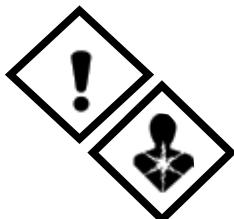

Flame Over Circle (GHS03)

Substances which give rise to highly exothermic reactions in contact with other substances particularly flammable substances.

Flame (GHS02)

Extremely flammable liquids have a flash point less than 0° C and a boiling point less than or equal to 35° C.

Exclamation Mark & Health Hazard (GHS07, GHS08)

Substances which present moderate risks to health by inhalation, ingestion or skin absorption. Substances which are non-corrosive but are liable to cause inflammation through immediate, prolonged or repeated contact with the skin or mucous membranes.

Exploding Bomb (GHS01)

Substances which may explode under the effect of flame or heat or which are more sensitive to shock or friction than dinitrobenzene.

Skull and Crossbones (GHS06)

Substances which present a serious risk of acute or chronic poisoning by inhalation, ingestion or skin absorption.

Corrosion (GHS05)

Substances which destroy living tissue.

Environment (GHS09)

Substances which, were they enter into the environment, would present or might present an immediate or delayed danger for one or more components of the environment.

Gas Cylinder (GHS04)

Handling Emergencies

Handling of flowing Acid Accidents:

1. Remove all persons from Danger zone.
2. Wash contaminated place with soap & water.
3. Apply Calcium Gluconate to affected areas.
4. Remove affected clothing.
5. Rinse eyes only with water.
6. Inform the Doctor.

Handling Unconsciousness:

1. Vomiting should never be induced.
2. Start mouth-to-mouth respiration.

Handling Fire Accidents:

1. Carbon dioxide is most frequently installed in the Lab. It suffocates fire and leaves no residue.
2. Use fire extinguisher for glowing or smouldering fires.
3. Use sand for metal fire.

Handling Cuts and Scratches:

1. Carefully wash with clean water.
2. Swab with cotton wool and apply surgical spirit.
3. Apply dressings in a normal manner.
4. Obtain medical attention.

Handling Burns:

1. Remove contaminated clothing.
2. Flush gently chemical burns with plenty of cold water.
3. Cover heat burn loosely with a clear towels.
4. Do not pluck blister or remove clothing sticking to the burn.

Emetics:

The response of different people to the various first aid methods used to induce vomiting is by no means uniform. A simple method is that of tickling the back of the throat with two fingers or a spoon. A useful and quickly available emetic is salt water (one tablespoonful of common salt in each cupful of lukewarm water) repeated until vomiting occurs.

First Aid Items

It is suggested, as a guide, that the following items should be kept in a clearly labelled first aid box or cupboard.

1. A Sufficient number of small sterilised unmedicated dressings for injured Fingers.
2. A sufficient number of medium sized sterilised unmedicated dressings for injured hands or feet.
3. A sufficient number of large sterilised unmedicated dressings for other injured parts.
4. A sufficient number of adhesive wound dressing of an approved type and of assorted sizes.
5. A sufficient number of triangular bandages of unbleached calico, the longest side of which should measure not less than 130 cms and each of the other sides not less than 92 cms.
6. A sufficient supply of adhesive plaster.
7. A sufficient supply of absorbent sterilised cotton wool in a container of an approval type and size.
8. A sufficient supply of approved eye ointment in a container of an approved type and size.
9. A sufficient number of sterilised eye-pads in separate sealed packets.
10. A rubber bandage or pressure bandage.
11. Safety pins.

It is suggested that in addition to the above provisions, which cater primarily for cuts and heat burns, each laboratory first aid box should contain the following :

1. Eye irrigation bottle – ½ litre capacity.
2. Tablespoon.
3. Bottle of Common Salt.
4. Bottle of Magnesium Sulphate (Epsom Salt)
5. Bottle of Milk of Magnesia (Dose: Two tablespoonsfuls)
6. Bottle of Vinegar of Acetic Acid.
